

# Console Tutorial

## 1 Activate Developer Controls

Go to your local Farming Simulator profile folder, which should be located here:

*C:/Users/<YOUR\_USERNAME>/Documents/My Games/Farming-Simulator201x/*

and open the XML file named game.xml with a text editor (e.g. Notepad).

Activate the development controls at the bottom of the XML file by changing **false** to **true** and save the file:

```
<development> <development>  
<controls>false</controls> ☐ <controls>true</controls>  
</development> </development>
```
